

Supplementary figure 1

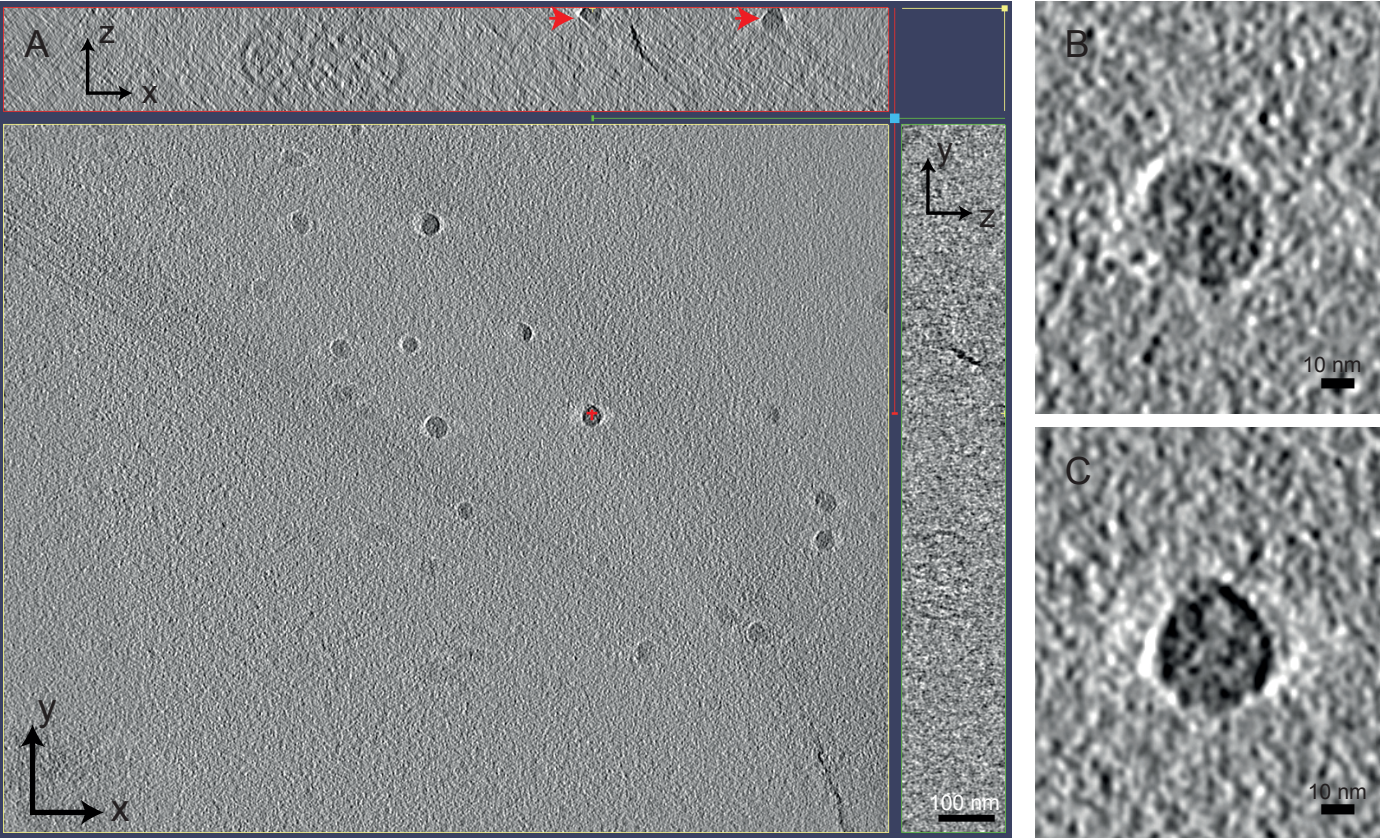

Figure S1: Cryo-electron tomography reveals that the dense particles are mostly found on top of the frozen sample. A) A XYZ image showing a slice close to the top of the electron tomogram, rich on electron dense particles. The z-x and z-y panels are slices centered on the red cross. The particles position is most clearly seen in the z-x panel at the top (red arrows). B-C) Zoomed in images of the dense particles shows no lipid bilayer.
